

WEON

**The Next Generation
Kiosk Solutions**

Company Introduction

WEON is a technology and kiosk solutions company specializing in intelligent, customized, and integrated self-service solutions. Our capabilities cover kiosk systems, IoT, automation, embedded electronics, software development, hardware integration, mechanical design, fabrication, deployment, and technical support.

Behind WEON is a **multidisciplinary team of software developers, hardware engineers, system integrators, designers, fabricators, and technical support personnel** working together to deliver complete solutions from concept to implementation.

The team is led by a founder with **more than 20 years of experience in the IT industry** and approximately **20 years of specialized experience in the kiosk industry**, covering hardware, software, system design, fabrication, integration, deployment, and project management. The founder has also been involved in the **management and implementation of government projects**, bringing valuable experience in handling structured, large-scale, and mission-critical deployments.

WEON's involvement in **IoT and connected technologies began more than 10 years ago**, and today the team continues to develop solutions integrating IoT devices, sensors, controllers, cloud platforms, remote monitoring, automation, AI-enabled technologies, QR and barcode systems, payment solutions, access control, smart lockers, queue management, and customized embedded systems.

What distinguishes WEON is our ability to bring multiple technical disciplines together under one team. Instead of supplying only hardware or software, **our team manages the complete solution lifecycle — consultation, system architecture, hardware selection, electronics, software development, UI/UX, industrial design, fabrication, assembly, testing, deployment, integration, maintenance, and ongoing technical support.**

This enables WEON to develop solutions tailored to each customer's actual operational requirements, from standalone kiosks to networked, cloud-connected and IoT-enabled systems.

With experience supporting projects across different industries and markets, **WEON aims to be a long-term technology solution partner rather than simply an equipment supplier.**

The background of the slide is a deep purple and blue nebula or galaxy, filled with numerous small white stars. On the left side, there is a stylized representation of the Earth. The globe shows the continents of Africa and Europe in a light green and yellow color. Overlaid on the globe is a complex network of white lines and dots, resembling a global communication or data network. The globe is partially obscured by a bright, glowing white arc that curves around its left edge.
